PadhAl: Variants of Gradient Descent

One Fourth Labs

Summary

Which algorithm do we use in practice?

1. Algorithms:

- a. GD
- b. Momentum based GD
- c. Nesterov Accelerated GD
- d. AdaGrad
- e. RMSProp
- f. Adam

2. Strategies:

- a. Batch
- b. Mini-Batch (32, 64, 128)
- c. Stochastic
- 3. Up till this point, we have been using GD with Batch update
- 4. In practice, Adam with Mini-Batch is the most popular choice
- 5. However, GD with Stochastic update is also used along with the use of special strategies to adjust the learning rate.
